Write a function to find the 2nd largest element in a binary search tree.↴

Here's a sample binary tree node class:

```
class BinaryTreeNode(object):  
  
    def __init__(self, value):  
        self.value = value  
        self.left = None  
        self.right = None  
  
    def insert_left(self, value):  
        self.left = BinaryTreeNode(value)  
        return self.left  
  
    def insert_right(self, value):  
        self.right = BinaryTreeNode(value)  
        return self.right
```
