

← [course home \(/table-of-contents\)](/table-of-contents)

Delete a node from a singly-linked list,[↗] given *only a variable pointing to that node*.

The input could, for example, be the variable `b` below:

```
class LinkedListNode(object):
```

```
    def __init__(self, value):
```

```
        self.value = value
```

```
        self.next = None
```

```
a = LinkedListNode('A')
```

```
b = LinkedListNode('B')
```

```
c = LinkedListNode('C')
```

```
a.next = b
```

```
b.next = c
```

```
delete_node(b)
```
